# ***Everyone Hates Ticks!***

**Join Blake Dinius, Plymouth County Extension Educator, for a science– based workshop via Zoom that will answer your questions and provide information to help keep you and your family healthy.**

## **Did you know?**

- Ticks are a re-emerging threat to human health. There are at least 10 tick–related diseases in Massachusetts, including Lyme disease. Each can have life-changing consequences.
- Ticks are everywhere. And you can find them on any day of the year, including during the winter.

BUT, what if you could enjoy the outdoors without worrying about ticks? The key is awareness and education, not fear. By understanding tick biology, we can make informed decisions to prevent tick bites and disease.

## **Get answers to these questions and more:**

- Are the ticks getting worse?
- Which repellents work best and are safe to use? Yard sprays, tick tubes, and fences, do they work?

## **You'll also learn about:**

- Mysteries behind tick biology and ecology
- Tick-borne disease in America from past to present
- Empowering science-based protection methods
- Simple landscaping tips to prevent bites

**[Register HERE](#)**

*Blake Dinius graduated with a degree in Biology from University of Massachusetts – Boston. Soon after, he began a 7-year career in insect research where he directed studies on bees, lacewings, springtails, earthworms, and other critters. He helped to develop guidelines and practices that are currently being used world-wide in the world of ecotoxicology.*

*As an extension educator, Blake is committed to delivering science-based education that you can rely on. With the right knowledge and tools, all tick-borne diseases are preventable.*
